

DOUGLAS COLLEGE – Fall 2025
CSIS 4495 – Applied Research Project
Project Defense and Final Report

Your project will be considered as a **PLAGIARISM** if:

1. The project is similar to the work submitted by other students within the same term, other terms or other sections.
2. The project is similar to any work found on the Internet or any other sources.

Project resulted from plagiarism will receive a ZERO mark and the students associated with the work will be reported to the Dean office for academic dishonesty case.

Introduction

The remaining assessment requirements for the CSIS4495 project constitutes the Project Oral Defense and Final Project Report. The Project Defense constitutes 20% of the mark while the Final Project Report constitutes two components: the assessment of the implemented project (15%) and the assessment of the final report (25%). Below is the information about each assessment evaluation.

Project Oral Defense

The project oral defense evaluates the ability of students to convey and communicate their completed research project. The project oral defense marking will include, not limited to, the following assessment parts:

- Eye contact and non-verbal communication
- Voice and verbal communication
- Organization and structure
- Content and knowledge
- Quality of the project demonstration

Final Project Assessment

There are two components in the final project assessment. The first part of the final project assessment is related to the quality of the implemented project. As of the writing of this guideline, the quality of the implemented project will be mainly depending on the following parts: the degree of completion of the project from the proposal (5%) and the value, contribution, and the perceived effort of the project (10%). It must be noted that the assessment will compare the submitted project to other course-project (within CSIS 4495 and other courses), the degree on ingenuity/innovation of the submitted project and the frequency or lack thereof consultation while the student working on the project.

Final Project Report

The final project report will assess the students' ability to document their research findings, to create technical documentation and to report their results in a clear, concise, logical manner. The final report should contain the components as listed in the following page. Note that point 3, 4 and 5 are part of your approved project proposal. Point 6, 7, and 8 are part of your documentation of the implementation. You can have as many sections of these

features as needed but try to limit to a maximum of four big sections. Within each section of the implemented feature, you can have introduction, challenges, changes, assumption, and details of the implemented features that may include good quality of screenshots with figure title and paragraph explanations. In the reflection part, you should reflect on the process in proposing and implementing the project, things you have learned and things you may want to do if you were asked to implement such a project again in the future. You should provide acknowledgement, if any, in the concluding remarks. You may document the installation guide of your project in Appendix A. On the other hand, you Appendix B explains how the user will use your implemented project. You may have additional numbers of Appendices as necessary. Along with this guideline, there is an accompanying word document template you can use for the final report. You can use that template or continue using your own document template that you use to submit the midterm report.

1. Title Page
2. Table of Content
3. Introduction
4. Proposed Research Project
5. Project Planning and Timeline
6. Implemented Feature A
7. Implemented Feature B
8. Implemented Feature C
9. Reflections (You can change this title into anything you feel better represent your content)
10. Concluding remark
11. References
12. Appendix A: Installation Guide
13. Appendix B: User Guide

Project Submission Requirements

File/folder structure and naming convention

You need to create a folder named as Project_ABcXXX with A signifies the first letter of your first name, Bc signifies the first two letters of your last name and XXX denotes the last three digits of your student ID. If you work in a team, appoint one of you as the team leader who will submit the project plan/proposal and reports. The project **must be submitted as a zip file**. Other type of compression (tar.gz, tar, bz2, rar) is not acceptable. Please **make sure to check whether your zip file can be unzipped and contains all the required files for the project**.

Team Lead: If you are working in a team, assign one person as the team lead who will be responsible for submitting your joint work (e.g., Proposal, Final Report, Midterm Report etc.). Note that progress reports are individual submissions.

The zip file must have the following structure:

Name/structure	Details
Project_ABcXXX.zip	Submitted zip file
└─ Project_ABcXXX	The project's folder
└─ Document	The project's document folder containing your proposal, reports, meeting logs, etc.
└─ Implementation	Any code and implementation that you want to submit along with your progress or report (if you think you are comfortable to submit it, and/or it is not too big). You may have several folders within.
	Note: I have the access to your GitHub. I can always clone your project if I need to.

The marking criteria for the Final Report (25 marks)

Note that these criteria are the guideline for you in writing and preparing your report. Your final report will be assessed by looking at it as a whole documentation.

Criteria	Grading
Good English and structure/composition. • Please check your grammar. Try to use formal language as best as you can. • Format your document as report with text paragraph. Do not use bullet points to provide explanations. • Make sure the structure and format (including the font size) of the title, subtitle and text are proper. • Make sure that each illustration has title and that the illustration have good resolution and quality, consistent and have good visuals.	3 points
Title page and table of contents	2 points
Final Report • The final report includes the components mentioned above, including the appendices. • The final report shows the student's expertise in performing their own research, establishing assumptions, designing their approach to address the problem they face in implementing their project, and change of direction (if any and with consultation). • The final report is coherent and flow without any jump of logic. Justifications, assumptions, tables and charts are explained and commented. • The final report shows that the students were able to propose a solid and clear idea on initiating an applied research project that shows their contributions and creative idea. • The report shows that the students are able to make a plan, work and revise their plan as necessary and make effort to achieve their goals to make an applied research project of a value. • The report shows that students were able to reflect on their effort and have an idea on how to improve and plan on what to be done if they need to work on such a project in the future.	20 points
